A Checklist for Implementing Cyber Protection for SMBs

[Sneak Peak >](#)

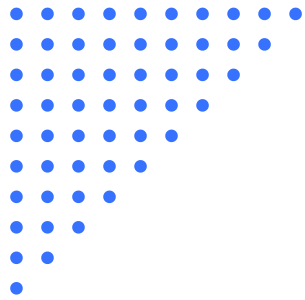

01 PREVENTION

Proactively protect your data, systems, and applications by preventing attacks from happening in the first place.

- Vulnerability assessments
- Patch management
- Data loss prevention (DLP)
- Security awareness training
- Self and collaboration tools protection (Zoom, Webex, Teams)

Swipe >

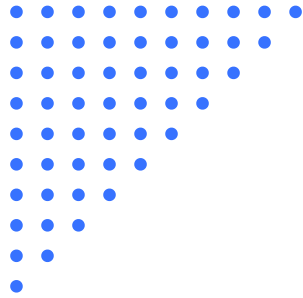

02 DETECTION

Detect issues and threats before they pose a risk to any environment.

- Antivirus and anti-malware
- Anti-phishing
- URL-filtering
- IoC-based detection
- Endpoint detection and response (EDR)

Swipe >

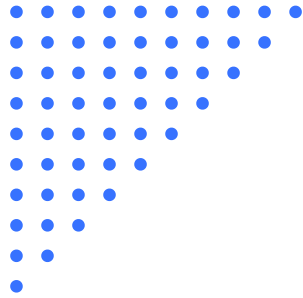

03 RESPONSE

Enable quick action to minimize risk.

- Block malware execution
- Device isolation
- Incident response
- Alerts and notifications
- Network security

03 RESPONSE

Enable quick action to minimize risk.

- Block malware execution
- Device isolation
- Incident response
- Alerts and notifications
- Network security

Swipe >

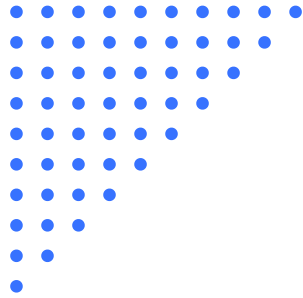

04 RECOVERY

Quickly and safely restore data from known, accurate backups in the event it gets compromised.

- Remove malware from backup
- Instant "in-place" recover affected data
- Safe recovery
- Automation
- Email archiving and recovery

Swipe >

05 FORENSICS

Mitigate future risks by collecting and performing forensic investigations.

- Full data backups
- Forensic data in backups
- EDR
